

Virtual Client Computing – Fast, Proven and Without Risk

Gernot Fels
Fujitsu Technology Solutions
Solution Marketing

Business requirements IT is faced with

■ Flexibility

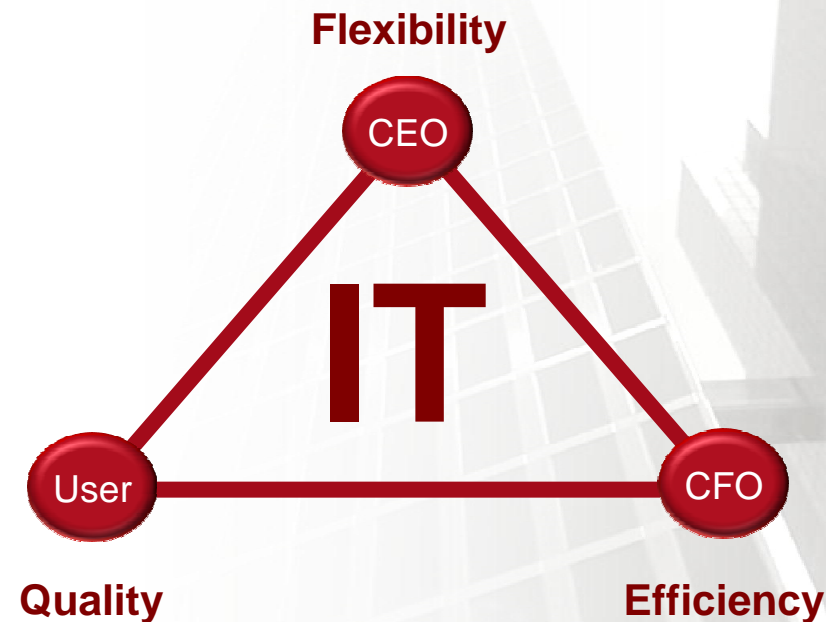

- Fast reaction on new business demands
- Rapidly adapt services
- Time-to-production of new services

■ Efficiency

- Reduce complexity and cost
- Transparency
- Cash flow
- Minimized risk
- Compliance

■ Quality

- Improved service levels
- Productivity
- End user satisfaction

Workplace computing as it used to be

■ Challenges

- Lifecycle management
- Business continuity
- Security risks (data loss and theft)
- Compliance demands
- Flexible access
- Resource utilization
- Energy consumption
- Costs

User
Apps
OS
HW

Virtual client computing

■ Concept

- Break tight coupling
- Independent lifecycles

■ Benefits

- Longer lifetime of components
- Reduce complexity
- Simplify management on component level
- Increase flexibility
- Fast reaction on changes
- Improve service quality
- Reduce costs

■ Virtualization can happen on any layer

Virtualization enables centralization

■ Concept

- Apps or data or entire workplaces in DC
- Front-end device for access only
- Increased importance of network

■ Benefits

- Flexible access from any device
- Simplified management / maintenance
- High availability / disaster recovery
- Minimized security risks
- Compliance
- Increased flexibility and speed
- Reduced energy consumption and noise (depending on access device)
- Cost reduction

Alternative approach for task workers

One size does not fit all: Requirements and economies matter

FUJITSU makes IT simple

■ Complete infrastructure solution

- All aspects of desktop virtualization
- Best-in class virtualization SW
- Servers, storage, NW components
- Access devices (Rich, Thin, Ultra-thin, Zero)
- Certified for virtualization technologies
- End-to-end services – based on project experience
- Infrastructure bundles
- Attractive financing options

■ Alternative sourcing models

- Infrastructure / Private cloud (self- managed)

■ Reduced complexity, time and risk

Customer example: A Large UK Bank

■ Situation and challenge

- 55K users
- Legacy desktop environment
- End of Windows XP support
- Office costs (€18,000 per year and seat)

■ Objectives

- OS upgrade without impacting users
- Change the way employees work
- Work from home (50% of employees for half a week)
- 20-40% productivity increase
- Reduce office cost
- BYOD
- Policy-based app access (device, location)
- Off-shore back-office functions within regulations
- Highest quality of service
- Cost reduction
- Avoid recurring high migration costs

Customer example: Procedure

- | | |
|----------------------|---|
| Workplace Assessment | <ul style="list-style-type: none">■ Analyze current situation■ Identify potential of improvement |
| Strategy workshop | <ul style="list-style-type: none">■ Identify business needs and goals |
| PoC design | <ul style="list-style-type: none">■ Align business goals to technology goals■ Formulate design criteria■ Design PoC infrastructure■ Define test scenarios and project plan |
| PoC | <ul style="list-style-type: none">■ Deliver and install test infrastructure■ Execute test plan■ Document, analyze and present results■ Recommendations, agree next steps |
| Project | <ul style="list-style-type: none">■ Implementation, transformation |

Customer example: Implemented infrastructure

FUJITSU

■ Solution

- 95% out of 18K apps virtualized

Microsoft

- **90% Hosted Shared Desktops**
Windows Server 2008R2 64-bit RDS
with Windows 7 experience
- **10% Hosted Virtual Desktops,**
for developers / users needing admin rights
- **Load balancing**
- **Policy-based access control**

CITRIX®

- **User Environment Management**
(e.g. app black lists)
- **Local print**

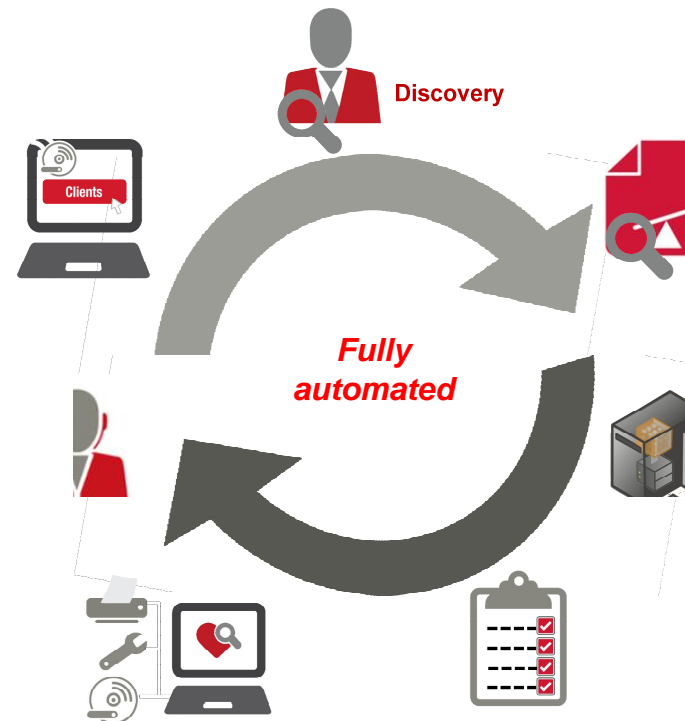

AppSense®
ThinPrint®

- **Infrastructure products**
- 2 DC for DR
- Replace rich client when written off or on failure
- Operation and support at monthly price per seat

FUJITSU

Customer example: Transformation

- Identify and remove unused apps
- Identify app dependencies
- Deploy user virtualization tool
 - Gather data transparently as users operate as normal
- Deploy user data sync tool
 - Sync user data transparently to central storage
- User logs on as normal
 - User is directed to Virtual Desktop
 - Device securely locked (remote cleaning after 30 days)
 - Switch back to old desktop if s.th. went wrong

- Re-purpose existing PC as thin client

Customer example: A Large UK Bank

■ Why they chose us

- Proven technology for any use case
- Focus on end user experience
- Understanding internal governance (key for success)
- Experience in defining desktop strategy for maximized benefits and minimized risks
- Transformation without impacting users
- Industrialized service
- Leader in Managed Workplace services
- Global (consistent) 24x7 coverage with multi-language service desk
- Flexible contract, lean processes, predictable cost
- Continuous improvement (*Sense & Respond*)
- ...

UK Bank

Summary

- Virtual client computing
 - Improve service quality and flexibility
 - Reduce costs
- One size does not fit all
 - Requirements and economy matter
- One-stop shopping with Fujitsu
 - Complete infrastructure solution
 - All concepts – all (certified) products – all services
 - Attractive financing options
 - All sourcing options
- Proven methodology and processes
- Experience

Fujitsu Virtual Client Computing – Fast, proven, and without risk.
